

Hycinthia Seisyll — Healing Affinity Strings

Using this table

- **PL** is Power Level. You can cast at a lower PL than your maximum.
- **TP** is Tension Points added when you attempt the cast; **DC** is the Thread Check target.
- The attribute beside each String is its Thread Check attribute.
- Unless stated otherwise, Healing requires **touch**, Blood effects require a visible target or position **within 30 ft**, and effects are immediate.
- Where a Blood effect calls for a **POT or RES save**, the target saves against that row's DC. A successful save prevents the listed condition; if the effect also deals damage, the target takes half damage.
- Hycinthia can shape **her own blood or blood already outside another creature**. She cannot seize blood inside an unwounded enemy. Blood is not created from nothing.
- If she must supply fresh blood for a Blood cast, the proposed cost is **1 VP at PL 1–2, 2 VP at PL 3–4, or 3 VP at PL 5**. This cannot reduce her below 1 VP. Recovering the blood does not refund VP.
- Healing cannot resurrect someone who is dead, restore lost memories, or automatically close Hycinthia's persistent wounds.

1. The Holdfast String — THS

Purpose: Keep life from slipping away. This was the first String to answer Hycinthia at age four: golden threads tried to hold her together while her blood rose around her in an uncontrolled defense.

PL	TP / DC	Healing expression	Blood expression
1	1 / 11	Stops one ordinary external bleed on a creature she touches for 1 minute . It does not restore VP or close a deep wound; the patient still needs treatment.	Raises a small blood shield around herself or an adjacent ally. It reduces the next incoming hit by 1d6 damage before her next turn.

2	2 / 13	Holds a serious bleeding wound closed for 3 rounds , preventing damage or deterioration specifically caused by that bleed. Moving the patient does not break the hold.	Extends a blood ribbon to an ally within 10 ft . It catches one attack, reducing its damage by 2d6 , then collapses.
3	4 / 15	Stabilizes one living creature at 0 VP , bringing them to 1 VP , and holds one severe bleed closed for 1 minute . This does not repair the injury that caused it.	Raises a wall up to 10 ft long until the start of her next turn. It provides full cover from one direction. The first creature to force its way through takes 2d6 slashing damage .
4	6 / 17	Stabilizes two creatures within reach , or sustains one critically bleeding patient for 10 minutes while someone treats them. It cannot sustain a patient left unattended indefinitely.	Creates a 15-ft defensive arc for 3 rounds while she concentrates. Allies behind it have cover; a creature crossing it takes 3d6 slashing damage once per round.
5	9 / 19	Holds one still-living patient on the edge of death for 3 rounds , even if several wounds are failing at once. This buys a narrow	Forms a 20-ft-wide protective enclosure for 3 rounds . It provides cover, and once each round

		chance to intervene; it does not reverse an immediately fatal injury.	Hycinthia can turn part of it against an attacker for 4d6 slashing damage .
--	--	---	--

Double edge: Holdfast can save someone without making them well. If Hycinthia pushes it too far, she may stay standing long after she should have stopped.

2. The Trace String — THS

Purpose: Find what is wrong. Golden threads trace an injury's path; a directed drop of blood can trace movement or mark an opening in combat. Trace gives **physical information**, not thoughts, motives, or memories.

PL	TP / DC	Healing expression	Blood expression
1	1 / 10	By touch, identifies the location and general severity of one injury : for example, a surface cut versus deeper damage.	A bead of blood marks one visible creature until the end of her next turn. Hycinthia can follow its movement within 30 ft , even through smoke or a crowd, but not through a solid wall.
2	2 / 12	Locates a hidden bleed or identifies which of several visible wounds is most urgent.	A thin blood line follows a marked creature for 3 rounds within 30 ft . Hycinthia ignores ordinary visual concealment when aiming her <i>next Blood String</i> at it.
3	3 / 14	Distinguishes physical trauma	Marks two creatures for 1

		from signs of poison, infection, or illness in one patient. It identifies the <i>kind</i> of problem, not automatically its exact cause.	minute. While within 60 ft , she knows their direction and can tell which one is visibly injured.
4	5 / 16	Examines up to three touched patients in succession and learns who will deteriorate first without immediate care.	Blood markers anticipate a marked creature's movement. Her next Blood String against one marked target deals +1d6 damage and ignores ordinary visual concealment. The marker then ends.
5	8 / 18	Maps complex, interacting injuries in one living patient, identifying what must be treated first and what an attempted repair might worsen.	Maintains up to four blood markers for 1 minute . She can direct a Blood String at a marked target she can reach around ordinary visual obstruction, but still cannot cast through a solid barrier or beyond the String's range.

Double edge: Trace tells her where a body is vulnerable. Whether she uses that knowledge to treat or strike is her decision.

3. The Seam String — CTR

Purpose: Bring separated soft tissue back together. Its Blood expression turns the same fine,

pulling motion into binding or cutting filaments.

PL	TP / DC	Healing expression	Blood expression
1	1 / 11	Closes a minor cut and restores 1d8 VP to a touched creature injured by torn soft tissue.	Sends a fine filament up to 15 ft for 1d6 slashing damage .
2	2 / 13	Closes a deeper cut, stops its ordinary bleeding, and restores 2d8 VP . It does not remove infection or repair a broken bone.	Deals 2d6 slashing damage . On a failed POT save , the filament also catches a hand or weapon, preventing that hand from being used until the end of the target's next turn.
3	4 / 15	Repairs a significant tear in muscle or skin and restores 3d8 VP . The patient may still need rest before using the injured area normally.	Deals 3d6 slashing damage . On a failed POT save , Hycinthia may pull a held object free or pin one limb until the start of her next turn.
4	6 / 17	Joins extensive fresh soft-tissue damage and restores 4d8 VP . It cannot replace tissue that is missing.	Deals 4d6 slashing damage and, on a failed POT save , Restrains one target for 1 round . The binding can be cut or broken normally.
5	9 / 19	Over 10 minutes , rejoins freshly separated tissue	Splits into several cutting seams. Divide 6d6 slashing

		when the original tissue is present and viable; restores 5d8 VP . It cannot grow a replacement limb.	damage among up to three targets within 30 ft ; one target that fails a POT save is Restrained for 1 round .
--	--	---	---

Double edge: A perfect stitch can close a wound. The same tension, pulled the wrong way, can open one.

4. The Set String — CTR

Purpose: Give a damaged body structure and support. Golden threads align bones and joints; shaped blood becomes a rigid brace, guard, or striking form.

PL	TP / DC	Healing expression	Blood expression
1	1 / 11	Supports a sprain or unstable joint for 1 hour , allowing careful movement without worsening it. This is support, not a completed repair.	Hardens blood around her forearm. She reduces the next physical hit by 1d6 damage , or makes one short strike for 1d6 bludgeoning damage .
2	3 / 13	Aligns a straightforward fracture and restores 1d8 VP . The bone remains fragile and needs ordinary recovery time.	Forms a sturdier guard for 1 round , reducing one hit by 2d6 , or a hardened strike dealing 2d6 bludgeoning damage .
3	4 / 15	Sets a complex break and stabilizes nearby damaged tissue; restores 2d8	A hardened blood limb strikes for 3d6 bludgeoning damage . A target

		VP. The patient cannot immediately use the limb at full strength.	that fails a POT save is knocked Prone .
4	6 / 17	Over 10 minutes , repairs a badly fractured bone well enough for cautious use and restores 3d8 VP . Severe surrounding injuries still need other Strings.	Maintains a blood brace for 3 rounds while concentrating. It reduces the first physical hit against her each round by 2d6 , and she can make one 3d6 bludgeoning strike during that time.
5	9 / 19	Over 1 hour , rebuilds a shattered but still-present bone and restores 4d8 VP . Recovery afterward is still necessary.	Raises a rigid 10-ft barricade for 3 rounds , or collapses that structure into one 5d8 bludgeoning strike. She cannot keep the barricade after using it to strike.

Double edge: Set is strong because it insists on a shape. An imprecise cast can preserve the *wrong* shape.

5. The Ease String — CTR

Purpose: Manage pain, spasms, and physical shock. Its Blood expression applies carefully directed pressure to absorb impact or hinder movement. Ease treats the body's response to injury; it does **not** cure the injury.

PL	TP / DC	Healing expression	Blood expression
1	1 / 10	Dulls pain from one touched injury until	A blood wrap absorbs 1d6

		the end of the patient's next turn. The patient can still tell that they are hurt.	damage from the next blow against Hycinthia before her next turn.
2	2 / 13	Reduces pain and muscle spasm for 1 minute , allowing examination or simple treatment without the patient fighting the pain.	Wraps one target's limb for 1d6 bludgeoning damage . On a failed POT save , its speed is reduced by 10 ft for 1 round .
3	4 / 15	Keeps a conscious patient steady through a painful procedure or injury for 10 minutes . It suppresses a penalty caused specifically by pain, not one caused by damaged anatomy.	Deals 2d6 bludgeoning damage through a tightening strand. On a failed POT save , the target cannot take reactions until its next turn.
4	6 / 17	Eases pain and physical shock in up to three touched patients for 3 rounds . They can communicate and follow treatment instructions despite their injuries.	Sends wraps around up to three targets within 30 ft . Divide 4d6 bludgeoning damage among them; targets that fail a POT save have their speed halved for 1 round .
5	8 / 19	Keeps one injured, living patient functional through extreme pain for 1 minute . It does not restore VP, and any	Concentrates crushing pressure on one target for 4d8 bludgeoning damage . On a failed POT save , it

		untreated injury remains when the effect ends.	is Restrained until the end of its next turn.
--	--	--	---

Double edge: Ease can make it possible to keep going. It can also make someone ignore a warning their body desperately needs them to hear.

6. The Pulse String — POT

Purpose: Restore or sustain vital rhythm. Hycinthia can steady breathing and circulation, or drive shaped blood forward in forceful beats.

PL	TP / DC	Healing expression	Blood expression
1	1 / 11	Helps a touched, living patient maintain a steady breath for 1 minute while the cause of their difficulty is addressed.	A short blood pulse deals 1d6 bludgeoning damage and pushes a target 5 ft on a failed RES save .
2	2 / 13	Steadies a dangerously racing or weak pulse for 3 rounds . It cannot overcome an untreated fatal wound on its own.	A stronger pulse deals 2d6 bludgeoning damage and pushes a target 10 ft on a failed RES save.
3	4 / 15	Sustains a living patient's breathing and circulation for 3 rounds , buying time for Holdfast, Seam, or ordinary treatment.	Sends a pulse down a 15-ft line for 3d6 bludgeoning damage to creatures in it. Those that fail a RES save are knocked Prone.
4	6 / 17	Restores breathing to a living patient who has <i>just</i>	A broad pulse in a 15-ft cone deals 4d6 bludgeoning

		stopped and maintains it for 1 minute , provided the underlying injury can be treated.	damage and pushes creatures 15 ft on a failed RES save.
5	9 / 20	While Hycinthia remains in contact and concentrates, sustains the vital functions of one critically injured living patient for up to 1 minute . It is emergency support, not resurrection.	Releases a focused, 30-ft blood surge for 6d8 bludgeoning damage to one target, pushing it up to 20 ft on a failed RES save.

Double edge: Pulse can hold a rhythm steady—or impose one with force.

7. The Cleanse String — THS

Purpose: Help a body remove what is harming it. When Hycinthia extracts a **real toxin**, her blood can contain and redirect it. She cannot invent poison that was not there.

PL	TP / DC	Healing expression	Blood expression
1	2 / 12	Clears a mundane irritant from a fresh wound and makes it safer to treat. It does not cure an established disease.	Forms a fine blood needle that deals 1d6 piercing damage . It has no poisonous effect without a real toxin.
2	3 / 14	Suppresses the effects of one poison in a touched patient for 1 minute , buying	A needle deals 1d6 piercing damage . If she has contained an extracted toxin, a target failing a

		time for treatment but not removing it.	RES save is also Poisoned for 1 round .
3	5 / 16	Removes one ordinary poison or treats a straightforward infection in a living patient. Recovery from damage already done still takes time.	Fires a contained blood needle for 2d6 piercing damage . With an actual extracted toxin, add 1d6 poison damage ; the toxin is then spent.
4	7 / 18	Over 10 minutes , treats a severe infection or complicated poison, provided she can identify what she is drawing out.	A blood spray in a 15-ft cone deals 3d6 piercing damage . If carrying an actual extracted toxin, creatures failing a RES save are Poisoned for 2 rounds ; the toxin is spent.
5	10 / 20	Over 1 hour , purges a deadly toxin or serious disease from one living patient. It does not restore tissue the condition has already destroyed.	A directed blood strike deals 5d6 piercing damage . If she has contained a potent, real toxin, one target also suffers that toxin's agreed effect on a failed RES save; the toxin is spent.

Double edge: Cleanse moves danger out of someone. What Hycinthia does with what she removed matters.

8. The Renewal String — POT

Purpose: Encourage recovery over time. In combat, Hycinthia can push her blood into a brief burst of speed and force—but the exertion catches up with her.

PL	TP / DC	Healing expression	Blood expression
1	2 / 12	Helps a resting, touched patient recover from ordinary exertion. Their next period of rest is more effective, but the String does not replace rest.	Moves a blood strand with sudden speed. Hycinthia gains +10 ft movement this turn and makes one 1d6 slashing strike.
2	3 / 14	Over 1 minute of care, restores 1d8 VP to a living patient recovering from recent injury.	Gains +10 ft movement this turn; one blood strike deals 2d6 slashing damage .
3	5 / 16	Over 10 minutes , restores 2d8 VP and eases ordinary physical fatigue. It does not remove magical Burnout.	Sweeps blood through two quick arcs. Divide 3d6 slashing damage between up to two targets within 15 ft.
4	7 / 18	Over 10 minutes , restores 3d8 VP and allows the patient to recover from substantial exertion without worsening their injuries.	Hycinthia moves up to 20 ft as her blood lashes along her path. Divide 4d8 slashing damage among up to three targets she passes.
5	10 / 20	Over 1 hour , restores 5d8 VP and supports recovery from severe but nonmagical exhaustion. It	Her blood becomes a brief, fast-moving storm. Divide 6d8 slashing damage among up to three targets within 30 ft. Afterward, she

		cannot erase Burnout or replace prolonged convalescence.	suffers Shaking Hands until her next Mend.
--	--	---	--

Double edge: Renewal can encourage recovery, but using its Blood expression is borrowing strength rather than creating it.

9. The Cradle String — CTR

Purpose: Protect someone fragile while they are being moved or treated. Its Blood expression is the deliberate, controlled form of a protective barrier.

PL	TP / DC	Healing expression	Blood expression
1	1 / 11	A golden lattice supports an injured, touched ally until Hycinthia's next turn, reducing the next damage they take by 1d6 .	Interposes a small blood screen, reducing one incoming hit against herself or an adjacent ally by 1d6 .
2	3 / 13	Holds one patient steady during movement for 1 minute , preventing that movement from aggravating an ordinary wound.	A blood screen reduces one hit by 2d6 and can be positioned between an ally within 10 ft and an attacker.
3	5 / 15	Supports two touched injured allies for 3 rounds . Each has the next hit against them reduced by 2d6 .	Forms a 10-ft wall that provides cover until the start of Hycinthia's next turn.
4	7 / 17	Wraps one living patient in a lattice for 3 rounds . It has a shared pool of	A jagged 15-ft wall lasts 3 rounds while she concentrates. A creature forcing

		3d8 damage reduction and keeps their injuries from worsening during transport.	through takes 3d6 slashing damage once per round.
5	10 / 20	Shelters up to three allies within reach for 1 minute with a shared 5d8 damage-reduction pool . Hycinthia chooses which protected hit spends from the pool.	Raises a 20-ft defensive dome for 3 rounds . It provides cover; once each round, a creature striking or crossing it takes 4d8 slashing damage .

Double edge: Cradle protects by enclosing. Hycinthia must learn when to let someone out, not only how to keep danger away.

10. The Burden String — THS

Purpose: Take on some of another person's suffering. Its Blood expression gives Hycinthia a way to defend or strike back with blood she has shed, but **striking back does not undo the burden**.

For the Healing expression, the listed VP moves from the ally's loss to Hycinthia: the ally regains that VP, and Hycinthia loses the same amount. She cannot reduce herself below **1 VP** this way.

PL	TP / DC	Healing expression	Blood expression
1	2 / 12	A touched ally regains up to 2 VP ; Hycinthia loses the same amount. She can sense their pain clearly for a moment afterward.	Shapes exposed blood into a reflexive 1d6 slashing counterstrike against a creature within 10 ft .
2	4 / 15	Transfers up to 4 VP of an ally's recent injury to	A blood ribbon intercepts a blow against an ally

		herself. It restores VP but does not remove a condition such as poison or a broken bone.	within 10 ft , reducing it by 1d6 , then strikes the attacker for 2d6 slashing damage .
3	6 / 17	Transfers up to 6 VP of injury from a willing ally within 10 ft . Hycinthia experiences the strain immediately.	A blood lash reaches 30 ft and deals 3d6 slashing damage . If she has taken damage protecting an ally since her last turn, it deals +1d6 .
4	8 / 19	Transfers up to 10 VP from a willing ally within 15 ft . She cannot pass that loss on again through Burden.	Interposes blood between an ally and an attack, reducing damage by 2d6 , then releases a 4d8 slashing counterstrike .
5	11 / 21	Transfers up to 15 VP from one willing ally, potentially keeping them in the fight at great risk to herself. It cannot take on an injury she could not survive.	Protects one ally within 20 ft from a hit, reducing damage by 3d8 , and sends the blood outward for 6d8 slashing damage against one attacker.

Double edge: Burden is not proof that Hycinthia must suffer to be useful. It is a powerful choice—and one she may be too willing to make.

11. The Reweave String — CTR

Purpose: Precise reconstruction of damaged living structures. This is slow, demanding medicine on the Healing side; in combat, the same precision creates intricate, temporary blood constructs.

PL	TP / DC	Healing expression	Blood expression
1	2 / 12	Over 10 minutes , guides a fresh wound toward cleaner healing, reducing avoidable scarring. It does not restore VP immediately.	Shapes a fine blood tool or hook that can manipulate a small object within 15 ft , or strike for 1d6 piercing damage .
2	4 / 15	Over 1 hour , repairs minor lingering muscle damage in a living patient and restores 1d8 VP .	Forms an articulated hook dealing 2d6 piercing damage . On a failed POT save , it holds a hand or object in place until Hycinthia's next turn.
3	6 / 17	Over 1 hour , reconnects a <i>recently</i> damaged tendon or nerve when the living tissue remains available; restores 2d8 VP . Full function may return gradually.	Several precise blood filaments deal 3d6 piercing damage . On a failed POT save, they disarm the target or bind one limb for 1 round .
4	8 / 19	Over several hours of uninterrupted work, repairs serious damage to a living organ or complex tissue and restores 3d8 VP . Trace may be	Creates a multi-part construct for 3 rounds while concentrating. It can guard one adjacent ally or strike a target

		needed first to understand the injury.	within 30 ft for 4d8 piercing damage once during its duration.
5	11 / 21	Over days of treatment, reconstructs severe but survivable tissue damage, restoring 5d8 VP across the treatment. It requires living tissue and does not resurrect or automatically resolve supernatural wounds.	Weaves a complex blood construct for 1 minute while concentrating. Once per round it can guard an ally or make a 3d8 piercing strike; it is not alive or independently intelligent.

Double edge: Reweave is about extraordinary control, not effortless regeneration. Hycinthia's own unhealed wounds remain a question this String cannot simply answer.

12. The Loom String — CTR

Purpose: See several lives as one treatment problem without treating the people as interchangeable. Golden threads organize triage; blood divides into coordinated strands for battlefield control.

For this String, listed damage or healing dice are a *total pool* to divide—not that amount for every target.

PL	TP / DC	Healing expression	Blood expression
1	2 / 12	Assesses two touched patients in quick succession and identifies which needs immediate help first.	Splits blood into two short strands. Divide 1d6 slashing damage between up to two targets within 15 ft.

2	4 / 15	Divides 2d8 VP of healing between up to two touched allies in any amounts she chooses.	Controls two strands within 30 ft. . Divide 2d6 slashing damage between up to two targets, or use one strand to catch an object instead of dealing its share.
3	6 / 17	Divides 4d8 VP of healing among up to three allies within reach and stabilizes any of them who were at 0 VP before distributing the pool.	Controls three strands for one cast. Divide 3d6 slashing damage among up to three targets; one target failing a POT save also loses its reaction until its next turn.
4	8 / 19	Divides 6d8 VP of healing among up to four touched allies . She may instead spend one die from the pool to stop one ally's ordinary bleeding.	Controls four strands within 30 ft. . Divide 5d6 slashing damage among up to four targets; alternatively, sacrifice 2d6 from the pool to give an ally cover until her next turn.
5	11 / 21	Over 1 minute , divides 8d8 VP of healing among up to five living allies she can reach and touch . She may stabilize them first, but cannot restore anyone already dead.	Weaves a battlefield network for 3 rounds while concentrating. It has a total 8d6 slashing-damage pool to spend across those rounds and can protect up to two

			allies with cover. Once the pool is spent, the network fades.
--	--	--	--

Double edge: Loom lets Hycinthia keep many people alive at once—or make many people fear where her blood will move next. Its challenge is concentration: losing track of one strand can compromise the whole pattern.
